RICH'S:

Rich Products Corporation, founded by Robert E. Rich, Sr. in **1945**, is a pioneering global food organization known for creating the **world's first non-dairy whipped topping**, Rich's Whip Topping®. With annual sales of **\$6 billion** and a presence in **over 110+ countries**, Rich Products remains **100% family-owned** and employs **over 13,000+ associates** worldwide.

Say hello to a global company with local soul, and to some of the smartest, most authenticated people you'll ever meet. The company is dedicated to innovation, customer satisfaction, and community betterment, continually setting new benchmarks in the food industry. Rich Products offers diverse career opportunities across various fields, including Supply Chain, R&D, Sales, Marketing, and IT, fostering a culture of collaboration, creativity, and integrity.

Job Description:

We are hiring motivated college interns to support our Platform Technology Services team across technical, analytical, and communication-focused areas. This internship offers hands-on experience with AI/ML validation, data analysis, technical documentation, and enterprise tools such as SAP, SharePoint, and DevOps. Interns will gain real-world exposure to modern AI platforms, business processes, and enterprise technology workflows—an excellent foundation for careers in data science, AI development, technical writing, or IT consulting.

Key Responsibilities

- Validate AI-generated outputs and support quality checks across AI/ML initiatives.
- Develop and refine **"Golden Questions"** to improve accuracy and performance of AI projects.
- Query datasets using Python and other analytical tools to support project insights.
- Create professional slide decks to communicate project value, results, and accomplishments.
- Assist with reviewing SAP technical documents including **PDDs, TDDs, and RICEF** objects.
- Support documentation efforts, technical writing, and marketing communications for technology initiatives.
- Help maintain and enhance SharePoint sites and support DevOps workflows.
- Collaborate with cross-functional teams to analyze requirements and contribute to solution design.
- Support day-to-day project activities, including status tracking, issue analysis, and testing tasks.

Required Skills

- Pursuing a Bachelor's degree in Computer Science, Engineering, Information Systems, Data Science, Communications, or related field.
- Some technical background with exposure to **Python**, data analytics, or scripting.
- Experience using **Microsoft Copilot Studio** or other generative AI platforms.
- Strong communication skills, including ability to write clearly and concisely for technical and non-technical audiences.
- Technical writing and documentation skills (requirements, design documents, testing materials).
- Interest or experience in data science, AI development, or enterprise systems.
- Ability to create clear and visually compelling executive-ready presentations.
- Experience with SharePoint or DevOps tools is a plus.
- Strong analytical mindset and willingness to learn new tools and technologies.
